Provando a fare come indica in output:

```
NO MORE HOSTS LEFT *****
  to retry, use: --limit @/usr/share/fuss-server/fuss-server.retry

PLAY RECAP *****
localhost      : ok=55   changed=4   unreachable=0   failed=1

root@server:~# fuss-server create --limit @/usr/share/fuss-server/fuss-server.retry
usage: fuss-server [-h] {create,purge,configure,test} ...

Il problema che aveva portato a questo è un errore (corretto) con il template dei dati da inserire su LDAP che non caricava gli utenti admin e nobody. Il problema di [#111](#) è diverso.

Per il --limit, ho aggiunto l'opzione a fuss-server, che viene ignorata (in teoria, dovremmo fare in modo che il playbook non fallisca e che quindi l'opzione non venga mai richiesta, in pratica, se anche fallisce usare --limit non cambia le cose, e non usarlo al massimo fa impiegare più tempo all'elaborazione).
